

Data Architecture

DEVELOPMENT TEST KNOWLEDGE - CueAI RAG fixtures. Not real customer or company documentation.

Development test data architecture: document metadata lives in the workspace store; original files are stored under a secured data directory; chunk text and embeddings are indexed in Qdrant when configured. Analytics events track retrieval latency separately from LLM latency.

Isolation Rules

DEVELOPMENT TEST KNOWLEDGE - CueAI RAG fixtures. Not real customer or company documentation.

Vector metadata always includes workspace_id, document_id, category, chunk_id, filename, page_number, and chunk_index. Cross-workspace retrieval is forbidden.
